January 20, 1995

To Whom It May Concern:

A & W Maintenance was awarded the contract by the Town of Easthampton to patch and line the interior walls of its 1.6 million gallon water storage tank in October 1994.

The tank was constructed around 1905 and consisted of concrete walls poured against the side of Mt. Tom.

The tank had substantial cracks in the walls and floor and water loss was estimated around 350,000 gallons per day.

The Town of Easthampton has noticed a substantial savings in water since the work was found to be very knowledgeable with the application of this material.

Very truly yours,

Joseph J. Pipczynski
Superintendent of Public Works

JIP/lpt
